

Case study

Ringway

Ringway is responsible for looking after over 50,000 kms of the UK's highways network. They deliver specialist highway services across the largest highways maintenance portfolio within the UK, including strategic road network, DBFO motorway and trunk roads, and the local authority network.

THE CHALLENGE

Ringway were seeking ways to reduce the risk of viral and bacterial transmission between their staff that have acted as key workers throughout the pandemic. Keeping their staff safe and confident is key to running a safe and efficient business responsible for some of the UK's key infrastructure.

THE SOLUTION

THB were engaged, and immediately rolled out the 5-Steps Sanitisation Programme to one of Ringway's main depots in the South-East of the UK. Testing was carried out within the main facilities and office workspaces, including numerous vehicles and plant. All areas including 50 vehicles and plant machinery were completely sanitised using the full 5-Step method and continue to remain within suitable hygiene levels, protecting its workers.
